

What traffic impacts will this project have?

- » Vehicle queue lengths were analyzed at signalized intersections during the morning, afternoon, and evening peak travel periods.
- » Evening (PM) traffic queueing is shown on this board since it has the most traffic volume. The full morning, afternoon, and evening report with queue lengths is included in the Traffic Analysis report.
- » The analysis concluded that vehicle queues are expected to remain within acceptable limits. As a result, there will not be any significant changes to travel time throughout the corridor.
- » New detection technology will be installed at the intersections, creating efficient traffic flow and benefiting emergency vehicles.

Key

- Existing Conditions Peak Traffic Queue Length*
- Proposed Conditions Peak Travel Queue Length

* Traffic Queuing is when cars line up while waiting for a traffic light to change.
